

IN ORDER TO OBTAIN FLEA INFESTATION CONTROL, YOU MUST TREAT THE ANIMALS, HOUSE AND YARD THOROUGHLY AND AT THE SAME TIME.

FOGGER INSTRUCTIONS FOR HOUSE

1. Read all instructions on back of can before fogging. You will need enough foggers to treat each individual room in the house, any crawl space under the house, and any garage or attached and/or enclosed building on the property. Foggers must contain an Insect Growth Regulator, sold under the brand name of "Precor" or "Nylar."
2. Thoroughly clean house.
3. Get rid of vacuum cleaner bags or material from vacuum to eliminate re-contamination.
4. Put a flea collar in the vacuum cleaner bag when you install it to control eggs.
5. Shut off all external air sources such as fans, windows, vents.
6. Shut off air conditioning or heat.
7. Turn off all ignition sources such as pilot lights and any appliances that cycle on and off like refrigerators.
8. Ceiling fans can be left on low or medium.
9. Remove pets and cover fish tanks (turn off filter systems.)
10. Shake foggers as you set them off.
11. Spot spray under beds, in closets, etc.
12. Position foggers and lock them down.
13. Leave house for minimum of four hours.
14. On return, open all windows and let the house air for one hour.
15. Only spot clean the next two weeks after fogging.

YARD CONTROL

*Fleas especially like cool, shaded, dark areas such as sheds, shops, under old cars, mowers, shrubs, trees, and especially under the house if you have a crawl space. Don't forget under the dog house!

* Ticks like all of the above also but concentrate under trees, footings and foundations around the house and any out buildings.

*Completely cover any and all of these areas with Talstar insecticide granules (available at Price Milling – 968-1662) or the granules of your choice. Then overspray with a yard and kennel spray to activate the granules and get a quick kill at the same time.

*Repeat this process in 2 weeks and possibly repeat granules in 2 additional weeks.

PETS

- Give Capstar the same day as you fog to control fleas.
- Treat pets every 30 days with Frontline, Certifect, Advantage Multi, Advantix, Comfortis, or Revolution to continue flea control.
- Pets in Arkansas must be treated all year as the flea population does not die out in the winter.

IF YOU FAIL TO COMPLETE ALL THE ABOVE STEPS, YOU HAVE WASTED YOUR TIME AND YOUR MONEY.
